## EXPERIENCE

### **Tech Advance, Lagos — *Systems Engineer***

November 2017 – May 2018- [Website](#)

I worked on an app that helps automate the different moving parts of ad-tech. The application would better informatics on buying ad-spaces in the advertisement industry and be a link between media agencies, broadcasters. I built several parts of the backend in PHP(Laravel) and the architected various components of the frontend in HTML and CSS. I also worked on government projects that manages projects from approval to finish.

### **True Rebel, Lagos — *Backend Developer***

January 2017 - November 2017

I worked on an internal project which helped monitor and aggregate company product sales. This bridged the gap between orders made by customers, logistics and delivery of products. It helped improve staff efficiency and automated the tracking/status of different product orders. I specifically worked on the whole backend and frontend from start to finish. I also worked on a project that helps students with college which aggregates schools for students depending on budget and other factors. One other part of the application I worked on was a rider app that handles third party leasing of cars.

### **Bincom ICT, Lagos — *Intern Web Developer***

March 2016 – January 2017

I worked with senior developers within an agile software development team to build complex apps for corporate clients. Had the opportunity to sharpen my skills in different areas of web development, front end (HTML, CSS, JavaScript & jQuery) and Backend (PHP, Yii) as well as manual testing. I collaborated with designers to create interfaces in HTML, CSS and JavaScript. I also learnt JIRA as a management tool.

## SKILLS

PHP

Laravel

HTML

5CSS3

JavaScript (ES6)

VueJS & Vuex

ReactJS & Redux

Python

MySQL

MATLAB

MS-Office

## LANGUAGES

English, Yoruba

## EDUCATION

### University of Lagos, Nigeria BSc, Chemical Engineering

2008 - 2014

## PROJECTS

### Classified Ads

[GitHub Repo](#) – [View Project](#)

A web application that allows users browse, create and pay for advertisements. Think Craigslist. Built with PHP (Laravel) and VueJS.

### GitHub Battle

[View project](#)

A web app that allows you battle with GitHub users and declares a winner based on an algorithm. Built this project while learning React and react-router with Tyler McGinnis.

### Dropdown Autocomplete Search Anything

[GitHub Repo](#) - [View project](#)

I used algolia, Laravel Scout and autocomplete.js to build a reusable dropdown search for about anything.

### Portfolio Website

[View project](#) – [GitHub Repo](#)

I created my portfolio website, with accessibility and performance in mind. I opted for plain HTML and CSS because there wasn't a need to use third-party frameworks or tools like ReactJS.
